## AGU Series Ground Fault Relay

NK Technologies has just introduced the AGU Series Ground Fault Relay. The AGU Series joins the AGL as a UL Listed product (UL 508), providing a complete range of GFCI solutions when a UL Listing is required. As more local and state electrical codes adopt the 2023 NEC, UL Listed products will become more important to your customer base.

### Key Features Maximize Ease of Use

- 5 mA fixed factory-calibrated setpoint.
- Response time meets “established period of time” requirement defined by the NEC for GFCI.
- N.O./N.C. mechanical relay outputs.
- Normally de-energized contacts.
- Green “power” LED indicates device powered.
- Red “status” LED indicates fault.
- Manual test button simulates fault condition to confirm functionality of both the ground fault relay and separate breaker with shunt trip accessory.
